

ABSTRACT OF THE DISCLOSURE

A command module, draw switch, blending and dispensing assembly, and multiple ingredient storage and delivery modules are added to a conventional milk shake freezer and dispensing machine. A selector panel is provided to enable the operator to dispense a shake-like product according to a customer flavor or mix order, upon raising the standard draw handle on the original dispenser head of the conventional machine.

The blending and dispensing assembly includes a high speed auger with backflow inducers for blending and moving the base and ingredient product. *
